

Mobile Appointment Booking App – Design Rationale

Business Type

Local Home Cleaning Service (Kochi, Kerala)

Target Users

Busy homeowners, apartment residents, and working professionals who need a simple way to schedule cleaning services without making phone calls.

Existing Problem

Most appointments are currently booked through phone calls and WhatsApp messages, leading to scheduling confusion, missed bookings, and delays in confirmation.

Booking Flow

1. Onboarding Screen
2. Service Selection
3. Date & Time Selection
4. Booking Confirmation

This flow minimizes steps and helps users complete bookings quickly.

UX Decisions

Simple Onboarding

Introduces the service and encourages first-time users to begin booking immediately.

Service Cards

Users can quickly compare available cleaning services and pricing.

Time Slot Selection

A simple date and time picker reduces booking friction and prevents confusion.

Confirmation Screen

Users receive immediate booking confirmation with service details, date, and time.

How the Design Improves User Experience

- Reduces dependency on phone calls and messaging.
- Makes appointment scheduling faster.
- Provides clear pricing and service options.
- Reduces booking errors through structured selection.

- Creates a professional and trustworthy experience for customers.

Conclusion

The proposed mobile booking app simplifies appointment scheduling for both customers and service providers while improving convenience, efficiency, and customer satisfaction.
